

# PLANT FOR SALE

## Highly efficient 420 MW Siemens Combined Cycle Power Plant

Naturkraft AS has decided to sell its 420 MW Combined Cycle Power Plant (CCPP) for relocation and is seeking expressions of interest from interested parties. The power plant is located in Kårstø, Norway, directly at the sea.

The Kårstø CCPP is a high-quality single train Siemens plant which has been designed for a yearly electricity production of up to 3.5 TWh (ca. 600 million Sm<sup>3</sup> annual gas consumption).

It has been run for approximately 24,000 equivalent operating hours (EOH).

The Siemens SGT5-4000F gas turbine had been overhauled in 2011 and thereafter only ran for a low number of EOH before it was eventually moth-balled in 2014.

*Naturkraft AS is a limited liability company jointly owned by the Norwegian energy companies Statoil and Statkraft.*
